

Jewelry detector

Brand:Koshikai

Model:GEM-3000 II

light source: Dual
ultraviolet radiation

Product size:430x280x290

Power:220V-50HZ/250W

The jewelry detector can effectively detect the reflection spectra of hundreds of types of jewelry, and the full spectrum can be obtained in 1 second. It can quickly distinguish between natural diamonds and synthetic diamonds based on sound prompts, and the software has corresponding PASS and NG, greatly improving detection efficiency. It can detect a minimum of 1 centimeter of diamond, batch detect course stones, and also detect inlaid gemstone products.
