

Precision grinding and polishing machine

Brand:BILIANG TECHNOLOGY

model:HTA-1800

power supply:380V

Inner groove size:500x500

weight:120

The magnetic polishing machine we use utilizes super strong electromagnetic force to generate eddy currents, which drive and conduct small grinding stainless steel rods. The stainless steel rods flow at high speed, turn around, and slide on various surfaces and inner holes of precision parts, achieving precision grinding and deburring effects such as deburring, polishing, and cleaning.
